FOR IMMEDIATE RELEASE

TERRAFORE AND LITHOGRAPHIX ANNOUNCE NEAR COMPLETION
OF 650 kW SOLAR PV INSTALLATION

RIVERSIDE and HAWTHORNE, Calif. – One of the largest solar photovoltaic (PV) installations at an industrial facility is in progress in the Los Angeles area and is scheduled to be on-line by the end of the year.

Terrafore, Inc. of Riverside, Calif. is providing the design, engineering, specification, vendor selection and project oversight for a 650 kilowatt installation at Lithographix’s Hawthorne facility.

Jeff Zebrack, Vice President of Finance at Lithographix, said, “This project represents one more step in our commitment towards adopting green and sustainable technologies and practices. It gives us the ability to proactively meet the expectations of our environmentally conscious customers. Terrafore gave us the best possible solution to suit the site conditions, met our specific needs and provided the best value for the investment.”

Anoop Mathur, Chief Technology Officer of Terrafore, said, “The Lithographix installation represents state-of-the-art technology, best-of-class installation and a very cost-effective execution.”

Los Angeles-based City National Bank provided Lithographix with a \$4.3 million lease to acquire the solar photovoltaic equipment.

“We’re excited to support Lithographix’s renewable energy efforts,” said Breck Fleming, senior vice president and manager of City National Bank’s Commercial Banking Services office in Riverside. “These types of projects are part of our commitment to supporting clients and companies that integrate sustainable, environmentally friendly practices into their daily operations.”

The 650-kilowatt facility will occupy almost all of the 170,000 sq. ft. roof of Lithographix. The energy generated will equal the energy consumption of 400 homes and will eliminate 630 tons of Carbon Dioxide emissions annually. This is the equivalent of taking 125 mid-size automobiles off the road.
